Dear Dr Collado-Vides,

I am writing to you from the Global Biodata Coalition (GBC), an international initiative focused on the sustainability and coordination of biodata resources that are critical for life sciences and biomedical research. Our mission is to bring together funders, policymakers, leaders of biological data resources and other key stakeholders to ensure that biodata resources—such as biological databases and bioinformatics services—receive the long-term support and funding they need.

Your biological resource (RegulonDB) was one of more than three thousand resources identified as part of our Inventory, undertaken to support our understanding of the world's biodata infrastructure. These resources include databases, archives and bioinformatics tools that are critical to global life sciences research. They collectively support key areas like genomics, proteomics, structural biology, ecology, biodiversity, and model organism research, providing open, high-quality data to the global scientific community.

You may already be aware of the GBC and its work and we want to remind you of ways in which you can actively participate.

Through two rounds of selection held in 2022 and 2023, the GBC has identified a set of 52 Global Core Biodata Resources (GCBRs) which are essential for the scientific community and which require sustainable, long-term funding to ensure their availability and reliability. We work with the representatives of these resources, through the GCBR Forum, to identify challenges and potential solutions to sustainability and raise awareness of these with life science funding entities worldwide. We continue to expand the list of GCBRs through periodic selection processes underpinned by independent, expert selection.

We are planning to run a third GCBR selection round during 2025, which we expect to open for applications in mid-April 2025. For biodata resources that meet the eligibility criteria, this will provide an opportunity to be considered to join the GCBR community. You can find out more about the current GCBR list and selection criteria here.

If you think your resource has the breadth and global reach of a GCBR, and you would be interested in applying to this upcoming third GCBR selection round we would very much like to hear from you so we can keep you posted on news and key dates. Please email me at dcarr@globalbiodata.org.

Not all biodata resources will be GCBRs, nor should they. Many high quality and important biodata resources will not meet the criteria to become GCBRs but are nonetheless vital to the communities they serve. Whilst it makes sense for GBC to have parts of its programme where it works directly with GCBRs, we are keen to work with and engage biodata resources of all types and work cooperatively to build more stable and sustainable funding approaches for the infrastructure as a whole.

We encourage you to visit the Take Action pages of the GBC website where you will discover two important opportunities for participation.

- The Open Letter campaign, launched in November 2025, has attracted nearly 500 signatures from scientists, data resource leaders and other interested parties around the world who seek to raise awareness of the fragility of the global biodata infrastructure and to mobilise support for the sustainability of critical biodata resources that underpin global life sciences research.

  We strongly encourage you to lend your support by signing the open letter.

- In January 2025 we published our White Paper outlining a strategic framework for developing cooperative approaches to fund and sustain biodata resources essential to life sciences and biomedical research. It highlights the urgent need for coordinated international funding to protect and maintain these critical resources for global scientific advancement.
  We strongly encourage you to read the White Paper and feedback your thoughts to us.

You can get in touch with us at any point at info@globalbiodata.org if you are interested in finding out more about GBC and getting involved in our work. To keep up to date with GBC and our activities, you can also sign up to our newsletter.

Thank you for your support for the Global Biodata Coalition—we look forward to working with you.

Kind regards

David Carr

Consultant

Hola a todos,

Esta invitación está impresionante. Habrá que evaluar si logramos cumplir con los requisitos para ser reconocidos como un nodo de la Biodata Coalition !

Dear David Carr,

Thank you very much for your email. I will work with my group to assess our situation to see if, hopefully, we could apply to become a
Global Biodata Resource. Most likely, I will contact you in the near future with more specific questions.

Thank you again,

Best wishes,

Julio
